

Intergy EHR by Sage for Orthopaedics

The business and practice of Orthopaedic medicine is changing. New advances in diagnostic imaging, surgical techniques and therapeutic protocols combined with reimbursement and regulatory changes make your job challenging. Whether you specialize in general orthopaedics, sports medicine, spine disorders, surgery, PT, joint reconstruction/replacement or all of the above, Intergy EHR by Sage, in conjunction with Intergy by Sage, can help you not only maintain control of your business, but gain strength!

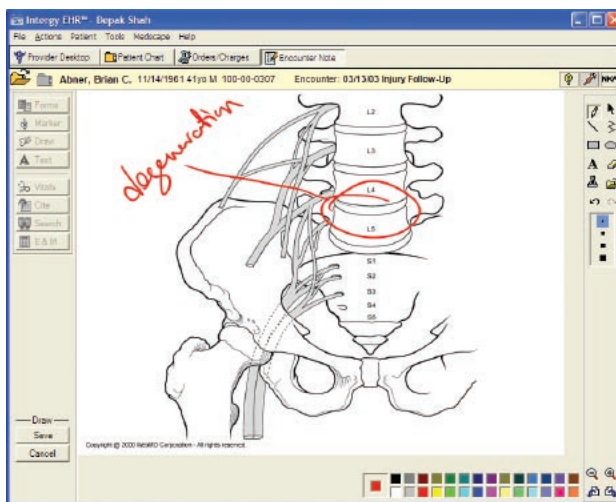

Improve Accessibility and Workflow

The process begins and ends with the patient chart, the centerpiece of each patient's care. Often practices struggle with keeping charts up to date or finding charts when they're needed. Intergy EHR addresses this by creating a digital chart, combining newly generated clinical information with existing paper chart content. When diagnostic studies, discharge summaries or other patient information come into your office, these can be electronically inserted into the chart as well.

We know that it is also important for you to quickly access and review the patient's chart. A configurable summary page allows you to select preferred clinical data elements such as procedure and test results, displaying a snapshot of the patient's medical record. In one view, you can see study results, surgical information, medications and more. Advanced features also allow physicians and clinical staff to view diagnostic studies directly within the patient's chart whether stored within Intergy PACS by Sage* (powered by Dynamic Imaging's IntegradWeb PACS) or a third-party PACS product.

Streamline Documentation, Ordering and Ongoing Care

The high patient volume in Orthopaedics requires efficiency in treatment planning and documentation. Structured clinical documentation and customizable templates allow you to comprehensively document the encounter and improve coding. You can also complete the visit by electronically ordering diagnostic tests, scheduling surgery, submitting prescriptions and documenting required follow up. Health Management tools can be set up to provide guidelines for preventive, post-operative and ongoing care. Clinical flowsheets make it possible to quickly review information across patient visits. A Flowsheet can instantly provide analysis of ROM values compared to pain levels compared to medication dosages recorded for a patient. Or, it can analyze anticoagulation therapy and corresponding blood levels for post-operative care.

BENEFITS

- Eliminate misplaced and lost paper charts with Intergy EHR
- Health Management provides reminders for upcoming or overdue care
- EHR Encounter Note can reduce or eliminate transcription
- Capture charges at remote locations
- Electronic prescribing improves the speed and accuracy of prescriptions
- Lab test requests and results are saved directly to the patient record
- Store and retrieve virtually all documents and images in the practice
- Access and analyze financial and patient data
- Use of the Medcin® nomenclature can improve care and coding
- Integrate seamlessly with Intergy and Intergy PACS

Document the encounter with tools that also enable you to annotate images electronically.

Manage Your Business More Effectively

Good decisions are often a by-product of analyzing accurate information. The architecture of Intergy EHR helps to ensure that you have the information you need whether it's for a single patient or a study of your entire patient population. Imagine stepping into your chart room and pulling a list of all patients for whom you've prescribed Flexeril. Impossible in the paper world, but virtually instant with Intergy EHR. Furthermore, advanced reporting for reimbursement initiatives linked to performance data can be handled using integrated Practice Analytics software.

FEATURES

Access and Maintain Patient Charts Online	With Intergy EHR Chart you can manage the patient chart electronically, virtually eliminating the problem of lost and misplaced charts. You'll replace the costs and inefficiencies of maintaining paper records with the benefits of being able to allow authorized staff to access the entire medical record online, in real time from multiple locations.
Deliver Quality Care	You'll be able to keep up with a fast-paced practice, deliver quality care, and even achieve Pay-for-Performance bonuses from payers with Health Management. This solution provides reminders of upcoming or overdue care to help ensure that the clinical guidelines you set for patients are met.
Document the Encounter Electronically	Encounter documentation is captured at the point of care, reducing instances where the costly and time-consuming dictation and transcription process is needed. Using Medcin's comprehensive clinical vocabulary allows the provider to document an encounter using discrete clinical findings at the point of care to help achieve Pay-for-Performance bonuses, conduct research and improve coding.
Intergy PDA Enables Remote Charge Capture	Have patient information and rounding schedules in the palm of your hand no matter where you are. From any location you'll have the ability to indicate diagnoses, charges, or even dictate notes.
Knowledge and Reference Links Provide Patient Education	Define the material you use for patient education and access that material with a single click while documenting the visit or reviewing clinical protocols established with Intergy EHR's Health Management features.
Send Accurate, Easy-to-read Prescriptions	Improve the accuracy and speed of prescriptions and streamline the renewal process with integrated electronic prescribing with DUR and formulary validation. *
Streamline Lab Order entry and Results Processing	Lab orders and results are saved directly into the patient record with automated lab solutions that connect you to most commercial labs along with in-office or hospital-based labs. *
Manage the Continuous Flow of Paper	Document and image management solutions enable you to efficiently capture and organize incoming and existing paper documentation into patients' electronic health records. **
Evaluate Clinical Outcomes	Practice Analytics works with EHR Chart and Encounter Note to help you evaluate clinical and operational indicators to assess performance and outcomes. ***
Improve Communication and Task Management	Automate the process of communication between front desk, billing, nurses and physicians and enable staff to more effectively manage tasks such as phone calls and refills with the Clinical Task Manager. Providers can use the system to manage clinical activities to improve quality and efficiency.
Use Web-driven PACS to Access Diagnostic Images from Anywhere	Web-driven PACS allows you to access images the instant you need to, from wherever you are, maximizing workflow efficiency, increasing profitability and improving patient care.

ABOUT SAGE SOFTWARE

Sage Software Healthcare Division is a part of Sage Software, the North American business of UK-based The Sage Group plc. Sage Software supports the needs, dreams and challenges of small and medium-size businesses (including medical practices of 500 employees and more) by offering leading business management, practice management and electronic health records products and services. More than 2.6 million North American small and medium-sized businesses and tens of thousands of medical practices currently rely on Sage Software applications.

For more than 25 years, Sage Software Healthcare Division has delivered easy-to-use, scalable and customizable software for practice management, including private practices, multi-million dollar medical enterprises and community health centers. Sage Software is CCHIT CertifiedSM for their product, Intergy EHR by Sage Version 3.5 for CCHIT Ambulatory EHR 2006.
